

NAGESH BACHANAGONI

Database Engineer | Data Analyst | BI Developer | Data Pipeline Architect | AI Automation Builder

nageshbachanagoni@gmail.com | (334) 895-7949 | Montgomery, AL | linkedin.com/in/nagesh-bachanagoni
github.com/bachanagoninagesh | Portfolio: bachanagoninagesh.github.io

PROFESSIONAL SUMMARY

Results-driven Database Engineer, Business Intelligence Developer, and Data Analyst with 4+ years of experience delivering data-driven solutions that improve productivity, automate business processes, and support strategic decision-making. Proven expertise in Power BI, SQL Server, and AI-powered analytics, transforming complex data into actionable insights that increase efficiency and reduce manual effort. Developed enterprise reporting platforms that increased annual sales by 20%, improved operational efficiency by 30%, reduced vehicle downtime by 25%, and automated ETL processes that cut reporting effort by 60-70%, enabling same-morning business intelligence instead of next-day reporting.

EDUCATION

M.S. Computer Science - Auburn University at Montgomery, AL | GPA: 3.5/4.0

Jan 2024 - Dec 2025

B.S. Computer Science - JNTUH University, Hyderabad, India | GPA: 7.5/10

Aug 2017 - Sep 2021

PROFESSIONAL EXPERIENCE

Power BI Developer (Contract)

May 2026 - Aug 2026

Alabama Commission on Higher Education | via GDH Government Services | Alabama, United States

- Developed the Student Horizon Report in Power BI, integrating wage outcomes, institutional, program, tuition, fee, and housing data into a centralized interactive platform that streamlined college and program comparisons and reduced consumer time spent researching information across multiple sources.
- Built a Zendesk Support Dashboard with manager- and agent-specific views and row-level security, centralizing support metrics and improving the efficiency of performance monitoring and workload management.
- Designed manager-facing analytics to track ticket assignments, resolution volume and rate, agent performance, issue categories, and annual trends, enabling faster identification of workload patterns, recurring issues, and opportunities to improve staffing and support processes.
- Developed a one-click email automation feature that generated pre-filled, editable messages to assigned agents and specialists, reducing manual communication steps and accelerating ticket follow-up and resolution.
- Supported SharePoint, Power Automate, and Power Apps solutions to automate workflows, reduce repetitive manual tasks, and improve business-process efficiency, while providing IT support for upgrades, installations, and hardware/software troubleshooting.

Data Analytics & BI Intern

Jan 2026 - May 2026

A&Z Closet LLC | Alabama, United States

- Collected, cleaned, and analyzed large datasets from Shopify, sales, and operational systems, centralizing business intelligence and accelerating leadership decision-making across sales, inventory, and customer engagement; established data quality and governance standards to improve accuracy, consistency, and reliability.
- Designed and optimized interactive Power BI dashboards and reports, transforming complex business data into accessible KPI-driven insights that reduced manual analysis and improved reporting efficiency.
- Developed and maintained Shopify REST API and webhook integrations with internal analytics platforms, enabling automated, real-time data flow while streamlining inventory categorization, collection management, and pricing processes.
- Built, monitored, and optimized automated ETL pipelines, reducing manual data preparation while improving data consistency, reporting reliability, and information availability across business units.
- Partnered with marketing, operations, and customer success teams to translate business needs into analytics solutions, delivering executive-level reporting that identified operational inefficiencies, improved resource utilization, and surfaced growth opportunities.

Data Analyst

Dec 2021 - Dec 2023

UST Global | Kerala, India

- Developed Power BI fleet analytics integrating SQL Server, Excel, and SharePoint data, increasing workshop efficiency by 30% and reducing vehicle downtime by 25% through improved KPI visibility and operational decision-making.
- Led development of the Sales Analysis Report as Team Lead, creating Power BI dashboards with advanced DAX for forecasting, trend analysis, and KPI monitoring that surfaced actionable opportunities and contributed to a 20% increase in annual sales.
- Engineered and optimized T-SQL queries, stored procedures, indexing strategies, and automated ETL workflows, accelerating data extraction and transforming multiple source systems into a centralized SQL Server reporting environment.

- Developed pricing and discount decision-support analytics that enabled leadership to identify sales opportunities, optimize discount strategies, and make faster, data-driven revenue decisions.
- Improved data quality and reporting reliability through automated validation rules, anomaly detection, data profiling, and root-cause analysis; resolved critical pipeline and reporting failures while maintaining audit documentation.
- Designed and deployed a Power Apps Customer Master Management solution using Dataverse and multi-stage Power Automate approval workflows, streamlining customer information requests and reducing manual processing steps.
- Established data-entry standards, validation controls, and governance workflows with business and IT stakeholders, ensuring consistent data integrity across UAT, SIT, and Production environments.

ETL Developer (SSIS) & BI Analyst

Mar 2020 - Dec 2021

Retail IT Solutions | Telangana, India

- Automated a manual, store-by-store Excel/CSV consolidation process using SSIS, reducing daily data preparation effort by an estimated 60–70% and significantly improving reporting productivity.
- Engineered a configuration-driven SSIS Foreach Loop, eliminating hardcoded store logic and reducing new-store onboarding from hours of custom development to a single configuration entry.
- Automated data cleansing and validation at ingestion, standardizing date and currency formats and filtering invalid records to improve data consistency and reduce downstream reporting errors and rework.
- Built store-level error isolation and automated logging, preventing individual connection failures from disrupting nightly processing and reducing manual troubleshooting and data-load re-runs.
- Replaced manual, next-day reporting with automated nightly data refreshes, providing store managers with same-morning Power BI insights into sales trends and inventory levels.
- Designed a scalable star-schema reporting architecture that improved Power BI query performance and supported additional stores and transaction growth without requiring pipeline redesign.

PORTFOLIO PROJECTS

JobMatchAI - AI Job-Search Automation Agent

Personal Project

Python - Flask - OpenAI GPT API - Render

- Built a full-stack AI job-search automation platform aggregating listings from **15 job board APIs** (Adzuna, USAJobs, Indeed, Lever ATS, etc.) via parallel **ThreadPoolExecutor** fetching, cutting collection time by ~80% vs. sequential requests.
- Built an AI matching pipeline with the OpenAI GPT API that scores job-resume compatibility, tailors resumes with ATS keywords, and generates custom cover letters across 24 parallel threads.
- Designed multi-user architecture isolating each user's resume, config, seen-jobs cache, and generated PDFs, with per-session deduplication to prevent redundant API calls and duplicate emails.
- Deployed on Render with Gunicorn and the Resend API for email delivery, including an IPv4-force socket patch for Linux cloud compatibility.

Stock Analyzer Pro - AI Market Analysis Agent

Personal Project

Python - ML Forecasting - Multi-Source Data - Web Dashboard

- Built an AI-driven stock analysis tool that pulls live prices, financials, insider activity, options data, news, and sentiment from ~10 sources and evaluates them across 29 signal categories to generate Buy/Sell/Hold verdicts with confidence scores.
- Implemented an ensemble of 8 forecasting models, dynamically weighted by recent accuracy, to predict future price movement.
- Built an 18-tab dashboard covering price charts, technical indicators, macro trends, portfolio risk and backtested trading strategies.
- Added portfolio optimization, market-regime detection (trending/choppy/volatile), and event-risk flagging (earnings, FDA decisions) for proactive decision support.

TECHNICAL SKILLS

SQL & Databases: T-SQL, SQL Server (stored procedures, indexing, query tuning), PostgreSQL, MySQL, Azure SQL

Data Pipelines & ETL: SSIS (Foreach Loop, config-driven packages, error handling), scalable ETL/ELT pipeline design, Apache Kafka, Apache Spark Structured Streaming, data ingestion & transformation

BI & Visualization: Power BI (DAX, star-schema modeling, Power BI Service, DirectQuery, Report Builder), Tableau, KPI dashboarding

Python & Automation: Python (data manipulation, Kafka producers, automation scripts), Power Automate, workflow automation

Streaming & Arch: Real-time distributed systems, event-driven design, micro-batch processing, fault-tolerant checkpointing

Process Mining: Celonis-compatible data modeling, process mining concepts, PQL logic, business process optimization

Data Governance: Data integrity, data profiling, validation rules, anomaly detection, audit documentation, UAT/SIT

Cloud & DevOps: Microsoft Azure (AZ-900), Docker, Docker Compose, Render, SharePoint, Dataverse, Power Apps (Canvas)

AI & Agents: OpenAI GPT API, LLM-based automation agents, prompt engineering, ensemble ML forecasting, Flask REST APIs

Programming: Python, SQL, R, SAS, Java, C, C++, HTML, CSS, JavaScript

CERTIFICATIONS

- Azure Fundamentals (AZ-900) - Power BI Data Analyst Associate (PL-300) - Power Platform Fundamentals (PL-900)
 - Power Platform App Maker (PL-100) - SAS Programming Certification - Shopify Essential Training
